HED, Inc. expands Telematics 4G LTE into Europe & Australia

In efforts to grow business, HED, Inc. expands its Telematics 4G LTE cellular service beyond the North America

Hartford, WI – HED, Inc. (Hydro Electronic Devices) a leading designer and manufacturer of vehicle controls and monitoring solutions for mobile equipment announced the launch of their expansion of 4G LTE for their CANect[®] brand Telematics solutions. The company obtained their certification for Europe and Australia beginning May 8th, 2020. The service expansion will allow OEM’s of industrial vehicles to gain connectivity between fleets across North America, Europe and Australia. “This effort is just the beginning of the globalization of our CANect Telematics solution for customers who operate across multiple countries.” stated Paul Ludwig President and CEO of HED. HED anticipates future expansion with certifications in South America, Middle East, & Africa.

CANect Telematics is an end-to-end solution enabling OEM’s to have complete flexibility in the design of their own Telematics solution. Deployed by the OEM, the CANect portfolio provides software applications for end users to monitor their fleets and has proven to be a useful tool for a variety of applications from condition-based maintenance to system integration for monitoring moisture, air, power levels and more. HED is well known for building strong relationships with customers, many times offering full engineering support.
