Antenna Installation

The antennas need to be installed with their respective SMA connector for proper compliance. The SMA connections need to be torqued from 7 to 10 in-lbf or the Metric equivalent range of 0.8 to 1.1 N-m

The mounting holes in the mounting tabs are compatible with a #10 type bolt (either 10-32 or 10-24). Mounting bolts should be torqued between 25 and 35 in-lbf. The Metric equivalent to the #10 is a M5 bolt with an installation torque range of 2.8 to 4N-m.

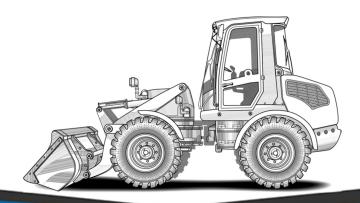

Software Development

Developers can choose between the CANect Software Development Kit (SDK) or the CANect® Composer® solution development utility. Each piece of software is free to customers and requires an NDA.
